Notes on ERDA Meeting to Discuss Problems Concerning

the Medical Examinations of Marshallena Peopla:-

(Germantown, Maryland, May 16th, 1977)

Those present at the meeting included: from ENL, Drs. Bond, Gronkite, Cohn, and Conard; from DOI, Janice Johnson; from ENLA, Drs. Burr (who chaired the meeting), Weyzen, Forster, and Messrs. Ray, McCraw, and others.

Conard gave a handout of suggested topics for discussion along with copies of some pertinent material and then presented a review of the events occurring in the recent medical survey in the Harshall Iclands in March-April, as background for topics to be discussed. A brief summary of discussion of major topics follows.

Future of DNL Medical Program in the Marshall Islanda

With Dr. Knudsen, the resident physician in the Marchall Iclands, leaving the program at the end of the year, and retirement of Dr. Conard scheduled for January 1979, recruitment of one or more physicians for the program will be necessary. Should the position of resident physician be continued? Is it necessary to continue four yearly vicing to Rengalap and Utirik? The following alternatives were discussed:

- 1. Recruit two physicians to relieve Conard and Knudson and continue the program as before. The resident physician might be acquired on a year-to-year basis with the help of some group, such so the University of Hawaii or the Public Health Service.
- 2. Have only one physician in the program who, in addition to administering the program from BNL, would visit the islands biannually for a

September checkup on the people and organize and corry out the annual medical survey in March-April. The Trust Territory would, hopefully, fill in for the other quarterly visits to the outer islands.

3. As in 1, except recruit a paramedic instead of a physician to be in the islands, and make the quarterly visits including assistance to the physician on the September trip and the annual survey. Alternative 3 seemed to be favored. The concensus was that quarterly trips should be continued if possible. BML would explore further these possibilities. It was pointed out that if the quarterly trips were abandoned an explanation; to the people would be necessary. In any event, a letter to Oscar deBrum concerning the future status of the medical program would be desirable.

ERDA might have gotten "nearly all the mileage" out of the program and another organization might-take over. It was pointed out that with the increasing development of hypothyroidism in many exposed people and the continued development of thyroid nodules there was, if anything, an increase in research interest in the program.

It was agreed that ERDA should support further training of one or more Marshallese personnel, perhaps at the University of Marshallese personnel, perhaps at the University of

Lottor to the Magintrate of Utirik

At the time of the March survey, the Utirik Council requested a letter as soon as possible as to whether ERDA would obtain a relief physician for Dr. Knudsen in order for continuation of the quarterly visits to their island. If no replacement was intended, they stated they would attempt to locate a doctor of their own for this purpose. A draft of a a letter to the Magistrate of Utirik was presented and since there was some objection to the wording of the letter, it was to be revised by ERDA.

The BRDA answers to the letters from the people of Rongelap and Utirik

It was agreed that BRDA needed to revise the present drafts of the answering letters in the light of the results of this meeting and recent events.

Response to Bakal and Bakal (law firm) letter regarding pending result by the Utirik people against ERDA

An answer prepared by ERDA lawyers at Las Vegaco was read. The letter outlined the concern and support (medical, etc.) of the Utirik people by ERDA (AEC) over the years.

Thyroid Control Study

It was pointed out that more information was badly needed on the general incidence of thyroid abnormalities in the unexposed Marshallese people in order that findings, particularly in the Utirik population, could better be evaluated with regard to radiation emposure. During the

past survey, some 300 unexposed people of Utility and Rongelse were included in a thyroid survey. It was pointed out that there might be parly a desemble people in the next two years in this group on whom thyroid curgery would be indicated. It would be desirable to have these patients taken perhaps to Tripler Army Hospital in Honolulu, using the same surgeon and pathologist who have been involved in the program. DEER agreed to give this program further serious consideration.

Briefing at DOI

The DOI representative auggested that a briefing of Mr. A. Winkel (new High Commissioner of the Trust Tarritory) and Mrs. Ruth Van Cleve (new Director of Office of Territories at DOI) by some LRDA representatives would be helpful, particularly prior to the UN meetings in New York. One of the topics to be discussed would be the problems accordated with the Congress of Micronesias PL-5-52 (concerning certain hospital benefits to Rongelsp and Utirik people). There is a disparity between the Congress bill and the ERDA-TT agreement which would seem to indicate a possible revision of the bill. Congressman Balos has indicated that he folt that such a revision would be required.

Ex gratia compensation bill for Rongelap and Heistle penale

At the request of DOI, an updated summary of modical findings was prepared. It was pointed out that the lists of people with findings were continuously being added to. Only 23 of 65 exposed Rongelap people now living are not listed as having thyroid abnormalities. The DOI representative remarked that the so-called Burton bill was an employed bill

covering several different Harshell Yaland compensatory topics, including the ex gratia despensation of the Rengelay and Will's people for including injuries. The bill had already been approved by the House of Representatives. Unfortunately, the changes in wording suggested by ENDA had not been included in the version passed. It is understood that some changes may still be suggested before the Senate consideration of the bill.

Annual medical checkups on Bikini and Eniwetck people

Fince the Bilini and Eniwetak people were not expected to radiation at the tites of the accident, as is true of the Rongelap and Utirik people, medical examinations would not be justified on the basis of possible radiation effects. However, the view has been expressed that these displaced people should be considered as a special group of Marshallere, and the fact that they will be living on islands that have been contemnated would warrant annual medical checkups for psychological reasons (recognizance) if for nothing more. It was noted that the Bikini people have requested by letter that the Bilinedical group visit them; also that Congresses Dalos has publicly expressed disappointment that the Eniwetak program does not include medical examinations of the returning people. The Chairman said that DBER would give this subject further consideration and report on their conclusions later.

Bioassay program - Bikini and Enivetak

Bikini - A letter to Dr. Liverman was presented with tables of 137Cs and Pu findings. The increase in 137Cs body burdens of the Bikini people

(10-12 times the 1974 icrols with some people admitted that they had been enting the assertious finding. The people admitted that they had been enting the forbidden pandanus and breadfruit which could account for the increased body burdens. With regard to Pu, the problems associated with cotting sufficient urine samples for analysis by "clean" technique, as recommended by TTG group, was mentioned and further consideration must be given to acquiring adequate samples. The Bikini situation would need cateful consideration by the new standing committee to be formed as described below.

Eniwetak - DOES thinks it urgent to have whole body counting done on the returning Eniwotak people within several months. It was agreed that BNL should arrange to have this done, using the existing whole-body counter trailer which would be set up at Eniwetak. Cost for new electronic equipment would be provided by ERDA. The present biomstay program (including sick call by physicians) would continue at Bikini for the present, but the Eniwetak biomstay program would not be connected with physicians.

The subject of bringing some Bikini people to New York for in vivo Am counting at NYU was discussed and the opinion was expressed that this might cause undue concern on the part of the Bikinians. The possibility of bringing non-Bikini people back for counting was suggested.

Decision-making responsibilities

Responsibilities for radiation assessment in the Marshall Islands in ERDA has been divided between DOES and DEER. DOES gathers radiological data from different laboratories (BNL - Terrestrial, University of

Washington - Marino Sampling, and Lawrence Livermore Leberatory - Deco.
Assessment) and DBER data of scientific inverset from the research point of view.

The need for a standing committee for overall evaluation of the environmental and personnel radiological monitoring data was egreed to be urgent. Perhaps both intra-agency, as well as inter-agency, committees with decision-making powers would be necessary. The ENVA remaittee would carry out at least annual reviews of radiological data and the Chairman advise on recommendations and necessary action.

Robert A. Conard, M.D.
