REMARKS:

DRAFT

"Based upon our understanding of the radiological monitoring program conducted by DNA and the results they have obtained, we also believe it is highly unlikely that [redacted] present medical condition has any relation to exposure of plutonium at JA. If, however, he believes there was some particular incident or situation that subjected him to a possible exposure, we would appreciate learning about it. In addition, we can arrange for an analysis of plutonium of his urine if it appears warranted -- this would show if [redacted] was internally contaminated.

I hope this is helpful. Please let me know if we can be of further service.

Signature".
