

Office Memorandum • UNITED STATES GOVERNMENT

TO : Dr. Charles L. Dunham, Director
Division of Biology and Medicine

DATE: MAR 12 1958

FROM : Morse Salisbury, Director
Division of Information Services

SUBJECT: PUBLICATION OF BOOK ON MEDICAL EFFECTS OF IRRADIATION
OF MARSHALLESE

SYMBOL: ISP:DC

As you know, we asked Admiral Foster for his judgment on whether publication of this book during the forthcoming test series would have an adverse effect on world opinion regarding the series. He has advised us that he believes the publication should be delayed until about August 1.

We should appreciate receiving your concurrence and/or comment on delay of the publication date until about August 1. I shall be glad to discuss the matter with you in further detail if you wish. Clarence Little is holding the manuscript at present. He suggests that, even if the publication date is delayed, the manuscript be sent to the Government Printing Office as soon as possible to allow ample time for preparation of the color plates. We see no objection to this procedure.

Admiral Foster also has advised that the publication of the Oughterson Report, "The Medical Effects of the Atomic Bomb in Japan", should be delayed until August 1. I am asking the Technical Information Service to take this up with McGraw-Hill.

cc: Wm. Henoch, TIS
C. Little, C&S

P.S. Our memoranda to Admiral Foster on the reports, with his comments written in ink on each, are attached for your information. Please return these for our files.
