

SUBJECT: MEDICAL STATUS OF MARSHALLESE ISLANDERS, 1954

it is a pleasure to report that the just concluded annual medical survey of the Marshallese natives exposed to fallout from the March 1, 1954, shot revealed no problems attributable to their radiation history.

The attached preliminary record, prepared by Drs. Conard and Hicking, provides the significant details of the observations. A more complete record of the observations and conclusions will be published by Brookhaven National Laboratory toward the end of the summer.

C. L. Dunham, M.D.  
Director  
Division of Biology and Medicine
