

Subject TIG Letter to Liverman and related matters

Attached is my suggested revision of your draft letter. I think the reasons for my changes are evident, though you may not agree with all of them.

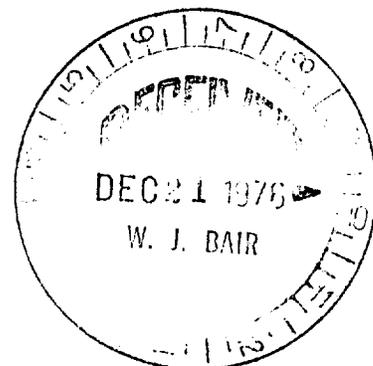

I will prepare minutes for the TIG meeting, but I would like to incorporate the final draft of your letter as indicative of TIG conclusions.

I am not sure that we need one more model of inhaled and ingested plutonium. I am not sure that the ICRP model is not as good as anything one could come up with. I would be especially leary of using high-exposure-level dog or rat data in developing a model for behavior in the human.
