Commander
Joint Task Group
Enewetak Atoll
Marshall Islands 96333

SUBJECT: Enjebi (Janet) Plow-X Area

The Department of Energy contemplates no further experimental use of the Plow-X area on Enjebi Island.

It is recommended that the two control areas, both of which exceed the residential island standard, be excised to approximately local background. We estimate that one 20 cm lift in these two areas will total 500 m³.

No further action is required in the areas which were actually plowed.
