MEMORANDUM For Commissioner Libby

Subject: RADIATION LEVELS ON BIKINI ATOLL

The information requested by you at the October 26, 1954 Commission Meeting concerning radiation levels on Eniwetok Island is as follows:

- a. 600 mr/hr at edge of crater
- b. 20 mr/hr at west end of former campsite diminishing to 1 mr/hr at eastern end of island.

Known radiation levels on other Bikini Islands are as follows:

Eniwetok - average 5 mr/hr with maximum of 25 mr/hr

Ramu - average 80 mr/hr with maximum of 200 mr/hr

Ronurikku - average 8 mr/hr with maximum of 30 mr/hr

The above readings were taken during October 1954.

No readings taken on Bikini Island but the estimated average is 25 mr/hr.
