

MESSAGES RE SKT NO. 1:

411542

1. Number: Unnumbered
- Date: March 3, 1954
- Time: 0017Z
- From: CJTF-7, ENIVETOK, MI
- To: CSUSA DEPTAR WASH DC, CHAIRMAN AEC WASH DC (DEPTAR PASSES)
- Subject: H + 48 hour advisory. Surface readings at Rongelap; Weather detachment evacuation; skin readings; no symptoms evident. Rogerik reading; aerial survey of Utirik.
2. Number: Unnumbered
- Date: March 3, 1954
- Time: 0530Z
- From: CPG-7.1, ENIVETOK, MI VIA LOS ALAMOS
- To: Bigler
- Subject: Heavy fallout East of Bikini; 20 weather personnel evacuated - their film badge readings; some natives Rongelap and Utirik evacuated; estimated theoretical maximum infinity dose, Rongelap; actual doses to be estimated on completion of evacuation and information sent.
3. Number: Unnumbered
- Date: March 3, 1954
- Time: 1155Z
- From: CJTF-7, ENIVETOK ATOLL, MI
- To: CSUSA WASH DC, CHAIRMAN AEC WASH DE
- Subject: H + 60 hour advisory. Evacuation of Rongelap; decontamination of natives; dosage estimates. Rogerik weather detachment dose estimates. Belief danger to Marshall Islands passed.

Date: March 10, 1954

Time: 0254Z

From: US NAV RAD DEF LAB SFPAW

To: CJTF-7, ENIWETOK AND CTU-13 (ATTN. CROWKITE)

Subject: USNEDL prepared to study and follow-up domestic animals if available from project 4.1 test area. Advise.

32. Number: NR S-234

Date: March 10, 1954

Time: 0603Z

From: CJTF-7, ENIWETOK

To: CHAIRMAN ABC WASH DC VIA LOS ALAMOS

Subject: Clarkson report to Fields and Bigher as of 101200. Dunning visit to Kwajalein: investigated health of natives. Original report about 20 natives sick first and second days based on their own statements, which are difficult to evaluate. No natives actually observed sick by medical personnel except 1 case of vomiting the first day aboard evacuee ship from Rongelap. Practically all Rongelap natives had

32. Subject (continued): skin itch. Itch ceased when decontaminated. No skin symptoms or signs yet. Erythema difficult to detect on native skin. Highest gamma reading (from hair) 400 milliroentgens per hour about about H+56 hours. Repeated washings have reduced readings to 7 milliroentgens per hour. Washings will continue. No estimate of beta dose. Average initial white blood counts at H+55 to H+75 was 7700. Repeat counts at H+158 was 5300. Greatest variance in white blood counts from Rongelap 24300 about H+75 hours, to 3700 H+130 hours, to 6000 H+158 hours. Another 60-year-old native white blood count H+55 was 12600, at H+68 was 6400, and at H+192 was 2200. Prognosis of Rongelap group depend upon further studies. Greatest variance white blood counts weather personnel Rongerik 10000 about H+32 hours to 5300 H+144 hours.

Great efforts being made to keep natives comfortable on Kwajalein. They are contented. Utirik group will be sent to nearby island Ebeye when High Commissioner directs and studied intermittently. Rongelap group retained Kwaj for intensive study by AEC/DOD research team. No decision as to time of return to home islands. Recommend wait until after series completed then re-check radiation levels again.

Estimated activity microcuries per square mile at time of fallout: Rongelap 3 at H+6 hours, Rongerik 2 at H+8 hours, Utirik 0.17 at H+15 hours. Soil and water samples being collected. One set water measurements at Rongelap showed concentration at D+3 days from 2 to 28 times above $\pm 5 \times 10^{-3}$. Team receiving excellent cooperation at Kwajalein.

33. Number: OUTGOING

Date: March 10, 1954

From: BIGGER

To: CJTF via LOS ALAMOS - FOR CROWKITE

Subject: Shipman at Los Alamos will do plutonium analysis urines. Selected 24 hour specimens highest exposure group preferable. Will give essential data ratio external internal hazards. Shipman also can furnish limited number additional personnel if needed.

(Lt. Berry of Group read and -dictated
all items to date : Items 1 thru 33)

34. Number: OUTGOING FROM NAVY

Date: March 10, 1954

Time: 1900Z

From: VAN C TIPPON CAPT MC DEPT OF NAVY WASH DC

To:

Subject: Suggest Cronkite be advised concerning NEOL desire to study possible internal effects in animals from forward area by dispatch to CDR JTF-7 c/o 13 13 Attn Cronkite Kwajalein.

35. Number:

Date: March 10, 1954

Time: 0649Z

From: NAVSTA KWAJALEIN (LeRoy)

To: USAEC WASH DC ATTN FINGER

Subject: Cronkite team organized in JTF-7 as Project 4.1 of TU-13 of IG 7.1, Scientific group. It is set up in adequate quarters, well supported by local command. Natives are properly treated. Their morale is good. Tobin, anthropologist for High Commissioner is most helpful. There are 4 exposure groups. Rongelap group, 65 natives, estimated dose 125r. Rongerik group, 23 Americans, dose 85 to 95r. Alinginae group, 17 natives, dose 74r. Utirik group, 154 natives, dose 10 to 20r. Today only Rongelap group has signs of injury. There are no symptoms. Findings consist of just significant reduction of white count. Daily situation report will be filed by Cronkite with our concurrence.

36. Number: S-CSTA

Date: March 9, 1954

From: LASL SHIBAHAN

To: FINGER

Subject: Following is boiled down version of what LASL has received, with some of LASL's thoughts as to what it means. Party remaining on NAN noticed radiation level rising at H-20 minutes. We understand this level reached 40r per hour and possibly higher. Rapidity of arrival of activity would indicate some mechanism other than wind borne fallout. Party on NAN remained in building and were evacuated H-10. Helicopter survey at H-4 showed following levels in r per hr: From 25 foot altitude, Tare 0.4; Sugar 1.5; Oboe 3.5; Nan 10; from

36. Subject (continued):

100 feet altitude, George 50; Fox 3; Dog 1; from 200 foot altitude, Charlie 10; Party landed on Dog at H-11 finding level estimated 80r per hour. We understand that most of the ships experienced moderate fallout but have no numbers. We have no results to indicate rate of decay on atoll.

Fallout traveled on an approximate line from Bikini to Bikar Atolls and was reported approximately 200 miles south of Hawaii at H-56 with intensity of approximately 0.04 mr per hour between 12 and 29000 feet. Reading at Rongelap at H-36 reported as 1.4r per hour. It was assumed that fallout started at Rongelap at H-36 hr. Natives were evacuated by H-31. Three member USAF Weather detachment Rongerik received estimated dose 98r on basis of one film badge; these people lived in tent. Four film badges representing remainder of personnel in metal barracks averaged 1hr. Weather Detach. unit evacuated H-36. Aerial survey of Utirik at approximately H-34 indicated ground reading of 0.6r per hour. Natives from Utirik evacuated by H-73 with estimated dose 17r.

It would appear that the weather played a dirty trick as we have seen it do in the past. We feel it quite important to do urine assays for plutonium on representatives of the groups receiving the higher exposures. This should give valuable data as to ratio between internal and external hazards. We would like to do some of these assays if we can be furnished 24 hour specimens. We can furnish limited number additional personnel if needed. I hope you will keep me advised as to any help we may offer.

37. Number:

Date: March 10, 1954

From: LASL SHIPMAN

To: BIGHER

Subject: Re making urine assays of exposed personnel. Requests, if Bigher approves proposal, that he advise Cronkite, Payne Harris and Shipman to leave for Kwaj at end of week.

38. Subject: CJTF-7

Date: March 11, 1954

From: BURGER

To: CJTF-7 EN VENETOK VIA LOS ALAMOS FOR CROWKITE

Subject: Shipman and Harris of LASL arriving soon for special urine samples.
— Will bring containers for consecutive 24 hour collections.

39. Number:

Date: March 11, 1954

Time: 2301Z

From: NAV STA KWAJALEIN SIGNED LIBBY

To: CJTF-7 EN VENETOK (INFO TO HIGH R)

Subject: Cannot agree that psychological reasons should determine disposition of Rongerik group. Cannot agree with clinical judgment that these men return to duty. Earliest possible men should be studied by Project 4.1 to obtain maximum amount of information on FOX PFTER metabolism and other aspects of radiation injury. Native groups are not satisfactory for metabolism and other studies because of taboos, language, and other differences. Rongerik group essential for mission of Project 4.1. Request they be transferred to this station at once.

40. Number: NR C-256

Date: March 12, 1954

Time: 0514Z

From: CJTF-7 VIA LOS ALAMOS (KRESLIN)

To: USAEC NY (INFO TO LOS ALAMOS)

Subject: SCO LR samples can be obtained subsequent next event from either Bikini or one of recently evacuated atolls. Bikini sample can be scheduled in regular recovery operations. Other will require special surface vessel trip. Is there a preference regarding location?
(Xerox for Eisenbud)

(For Eisenbud) Gummied px film supplies never sent to Rongerik. Soil and water samples will arrive LaGuardia via Flyaway 23 scheduled depart forward area H-36. Suggest you contact JTF-7 rear for ETA New York. Accompanied by Graves, checked scintillometer against several Bikini islands on March 8. Graveson prepared curve which includes much on previous available calibration data. Believe curve valid for expected altitudes.

41. Number: SVC 6785

Date: March 12, 1954

Time: 2255Z

From: FRY USAEC NYO

To: USAEC WASH DC INFO CY FOR BINGER ACTION CY TO CJTF-7 ENDEBOK

Subject: Pass to Breslin. Gummed paper from USS Kerapi indicates a fallout equivalent to 4000 curies per sq. mi. on Bravo + 1 day. Course of vessel given. Total dose 3 feet above deck from Del 1 to Del 2 estimated less than 6000R on basis of gummed paper measurement. If possible headed for forward area. If available would like gamma survey data at 3 feet off deck to check our estimate of lrr per hour at present time. From H. Cleveland

Part 3: Rongerik group of Americans changes limited to blood. Part 4: Mr. S. C. Chairman, 4C, visited Kujak March 20 to see natives and the exposed Americans first hand.

DP. Number: DDC 2460

Date: March 21, 1954

Time: 0540Z

From: CJTF-7 BIREKOK

To: DMA AGC WASH DC

Subject: After receiving advice from my staff surgeon, radiological safety advisers and scientific Director, I have authorized a maximum permissible exposure (radiation) to a limit of 7.8r (gamma only) which may be applied at any time during the 13 week period of the operation for a limited number of critical Naval personnel. My radiological safety regulations which have been approved by the Departments of the Army, Navy, Air Force, and by the SEC contain the provision "the NAVS and PMS are subject to revision by waiver from the Task Force Command in individually designated cases when circumstances indicate the need and justification therefore". The same regulation referred to above contains authority for MRS of 20r (gamma only) for the operations period for crew members of flying aircraft.

The personnel for whom the MRS has been increased to 7.8r includes the following: 30 helicopter pilots and plane captains; 120 boat operators; 100 men of boat pool; 75 flight deck crewmen of USS Bairoko, and 263 crew members of USS Phillips (DDH98).

I propose additionally to increase to the same limit a small number of individual crew members of critical groups listed above who already have received more than 3.5r but less than 7.8r and who will be so employed as to minimize probability of further exposure.

It is desired that in the future the Phillips will not be in the vicinity of the shot area except in emergency.

It is proposed that will be able to assign personnel with dosages of 3.0r or less to activities requiring minimum or no exposure. In the interest of efficiency and continued progress and cost involved, coupled with the relative insignificance of any doses in the region of 7.8r, plan to continue using these personnel.
